Guidelines for the presentation of work

C/W (Classwork) or
H/W (Homework)
written on the left
and underlined with a
ruler.

Title and
sub-titles
written neatly
and underlined
with a ruler.

Date written on
the right and
underlined with a
ruler.

C/W Monday 30th January 2012
How are Coastal Landforms created by deposition?

What is Deposition?

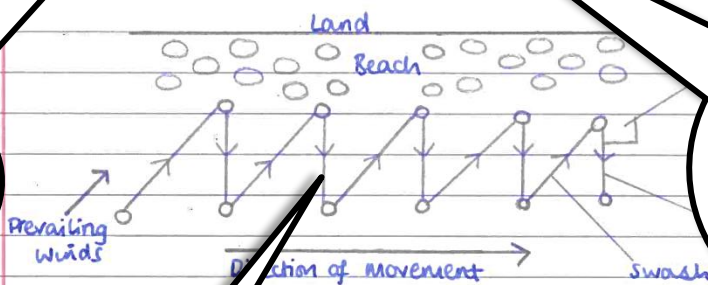

When the sea loses energy, it drops the sand, rocks and pebbles it has been carrying.

How and why do constructive waves build up beaches?

Constructive waves have a large and strong swash which pushes sand and pebbles onto the beach. They also have a weak backwash, so ~~less~~ more is deposited than is taken away.

A neat line with a ruler to indicate the end of a section of work.

H/W Tuesday 31st January 2012
Long Shore Drift

Mistake indicated by a single neat line through it.

Next piece of work starts immediately after the previous one so that no space is wasted.

Diagrams drawn neatly in pencil and labelled in ink.

Double line with a ruler to indicate that the teacher has asked you to start the next work on a new page.

Destructive waves are associated with coastal erosion, because they have a strong backwash which drags sand backwards. Constructive waves cause coastal deposition by having such a strong swash. The swash on a constructive wave pushes sand forward, depositing sand onto the beach.
